

INTEGRATEC

API PLATFORM

BCC
SOFTWARE

BCC Software's suite of address quality, mailing preparation, and data quality services have been recognized across the industry for their robust capabilities for over 35 years. We increase our customer's productivity and reduce costs by delivering comprehensive features, integration friendly products, and unlimited access to USPS Mailpiece Design certified support professionals. BCC Mail Manager, our USPS certified address quality and mailing preparation software, is relied on by thousands of companies, including some of the country's biggest mailers. As a result, our solutions improve deliverability and reduce postage on around a quarter of the US mailstream every year.

BCC Mail Manager gives businesses the benefits of numerous features, allowing users to create a package that best suits their needs.

BCC Software solutions are integration ready, and include API toolkits for custom integrations along with prebuilt connectors to many other software packages in your existing workflow. Launched in June, Integratec is the first and only available PAVE™ certified API using the secure messaging layer, ZeroMQ™ with the CurveZMQ protocol, enabling Integratec to pass even the most stringent security requirements for mailers in industries like healthcare and finance. The Presort Toolkit, the first toolkit released with Integratec, handles the presort process beginning to end and seamlessly integrates with up and downstream processes.

We complete the direct contact lifecycle with our comprehensive suite of data marketing services. BCC Software offers full service data management and campaign execution services, backed by data licensed from the USPS as well as a handful of carefully selected partners. We also offer mailpiece tracking and reporting that leverage the USPS Intelligent Mail barcode (IMb) to improve visibility into the mailstream and enabled timed multi-channel communications.

BCC Software's leadership in the postal technology industry gives its customers an edge. Company president Chris Lien, a former Mailer's Technical Advisory Committee (MTAC) Industry Chair, provides first-hand insights from the USPS on mail-related products and services, making our customers experts among their peers and invaluable resources to their end clients.
