Bell and Howell is shaping the future of mail, commerce and digital communications.

The company is an innovative service and technology solutions provider focused on enriching customer communications and fulfillment for the world's largest finance, industry and public sector enterprises. Its software and hardware streamlines high-volume, high-integrity print and production of customer communications and products, while maximizing postal discounts, and monetizing every customer touchpoint.

As experts in end-to-end production workflow, Bell and Howell specializes in high-integrity, high-security environments where mistakes are simply not tolerated. These include highly regulated and sensitive industries. It offers solutions for high-speed inserting and wrapping, vision inspection, factory automation, enterprise communications management, postal soration, and parcel production and management. Additionally, the company is a pioneer in software and systems supporting the business-transforming plain paper factory, with solutions that enable personalization, promotion, waste reduction and performance at a scale previously impossible.

Ranked among the most sophisticated in the world for production automation and industrial mechatronics, the Bell and Howell Global Services organization has hundreds of customer service engineers across North America who can reach nearly any location within two hours. And Bell and Howell now services over 50 brands of systems used in print and mail production as well as other solution areas such as cash dispensing machines, intelligent parcel terminals, wide format printers and even robotics.

In the parcel and packaging area, Bell and Howell continues to deliver innovation. Since launching the [ParcelMgr](#) and [CartonWrap](#) in 2013 and it's newest labeling system, Raptor in 2016, the company has helped customers lower the cost of parcel fulfillment and delivery by automating tasks of creating the package, reading, weighing, labeling and sorting parcels.

Finally, [Smart lockers](#) are emerging as a powerful new solution for 24x7 deliver, pick up and drop off of small to medium-size parcels. That's why Bell and Howell joined forces with Cleveron, a postal technology company based in Estonia, to jumpstart parcel terminal delivery in North America.
