

Click2Mail
Mail made easy

FAST TRACK TO THE CLOUD

Click2Mail.com does much more than making mail easy. As a pioneer in cloud-based hybrid mail and API-enabled mailing automation, our technology has helped thousands of businesses streamline the printing and mailing of millions of letters, statements, postcards and self-mailers through cloud-based automation.

Our approach is simple, but powerful. We offer print-to-mail services on-demand: on the Web, in the Cloud, via APIs - even via e-mail. Click2Mail helps you send mail whenever, wherever and however you need it, with no minimum volume – one or ten thousand, printed and mailed the next day. Postcards or letters printed in economical black on white or full color, with a choice of formats, plus personalization with templated variable data functionality. Most importantly, we know postal inside out and our on-demand outsourcing services produce professional-quality mail. Give us your First-Class Mail, Standard Mail, Certified Mail, Priority Mail and more, and rest assured that every address will be CASS standardized and that every mailpiece will have an Intelligent Mail barcode. Producing high quality mail on demand is not simple, but mail is still an essential communications tool - Click2Mail's goal is to make sending a critical business document via mail as simple as sending an email.

Click2Mail's innovative cloud-based mail outsourcing services provide a variety of simple interfaces to meet specific needs of your organization. Email to Mail provides a simple postal mail interface through email. You or your computer application send an email and Click2Mail prints and mails the attachment(s) the next day. Our APIs automate postal mail from your internal systems or application. Click2Mail offers you a choice of APIs that enable the integration and/or automation of programmatic mail-sending processes into any system or application. XML/PDF provides a batch processing interface for large and small mailers. MailJack Plus print driver lets you turn PDFs into postal mail directly from within applications. MailMyDoc for Google Apps is a free app that gives users the ability to send their documents via First-Class Mail with just three clicks. Whichever interface you use, your document(s) will be printed by Click2Mail and mailed the next day.

Sound interesting? Call us today at (855) 294-5601 and find out what mail automation and print-to-mail outsourcing can do for your bottom line - and peace of mind.
