Send.Receive.Connect.

Neopost USA provides hardware and software to mailers and shippers of all sizes. Neopost-brand solutions enable businesses to send and receive physical mail, digital documents and traceable packages. More importantly, Neopost solutions help customers connect with their customers by establishing individualized, one-to-one business relationships. Founded in 1924, Neopost has grown to become a leading provider of mailing and shipping solutions as well as digital communications management. Its fastest growing product segments improve business-critical processes that occur outside of the traditional mail center.

**Meet Your Business Objectives with a Comprehensive Solution**

Neopost USA is best known for physical mail expertise and its extensive range of mail center equipment. Today, the company has transformed into a major player in digital communications management and shipping automation. Neopost USA's software solutions provide businesses the ability to maintain high quality customer contact data, deploy electronic document delivery and apply cost-saving, enterprise-wide shipping controls. Together, Neopost USA's comprehensive portfolio of hardware and software solutions help organizations increase operational efficiency, enhance process integrity and deliver a superior customer experience.

**Manage Customer Communications Through a Single Platform**

Neopost USA provides a single platform that effectively manages customer communications without changing a customer's existing business applications like enterprise resource planning (ERP), customer relationship management (CRM) or accounting platforms.

This unique solution, OMS-500, is a multi-channel output management solution that runs on the highest performing platform in the industry. It provides organizations with the ability to automate the manual document preparation processes while validating customer contact data through its integration with Satori Software. It also integrates with a unique, cloud-based ConnectSuite e-Delivery solution that allows businesses to easily evolve to digital communication and manage recipient preference without user intervention.

**Secure Your Communications**

Privacy regulation compliance and the responsibility to protect personal customer information have escalated into legal requirements in many industries. It is essential that businesses do not mistakenly send communications to the wrong customer. OMS-500 addresses this concern by adding integrity to the mail assembly process. It secures each mailing piece with a unique barcode and provides mail piece tracking to ensure critical communications reach the intended recipients.
