

BCC SOFTWARE

Offering data-driven solutions that enhance direct communications anywhere along the workflow spectrum, BCC Software has been the industry leader in postal presort software and address quality solutions for over 40 years.

BCC Mail Manager™, our USPS®-certified address quality and mailing preparation software, is relied on by thousands of companies, including some of the country's biggest mailers. As a result, our solutions improve deliverability and reduce postage on a quarter of the US mailstream every year. Plus, you'll receive unbeatable customer service and support from our team of USPS Certified Mail Piece Design professionals.

BCC Software solutions are integration-ready and include API toolkits for customization along with prebuilt connectors to many software packages already in your workflow. Integratec® is the first and only available PAVE™-certified API, using the secure messaging layer, ZeroMQ™, with the CurveZMQ protocol, enabling Integratec to pass the most stringent security requirements.

Completing the direct communications lifecycle with a comprehensive suite of data marketing services, BCC Software is focused on expert address standardization. We offer full-service data management and campaign execution solutions, backed by data licensed from the USPS and a handful of carefully selected strategic partners.

BCC Software is dedicated to bringing our customers expanded technology and personal support to make sure they have the right tools to succeed in this ever-evolving industry. That's why, in 2019, we introduced Bulk Mailer SMB®, a powerful data quality tool specifically designed with small and medium-sized businesses in mind and offered at affordable subscription pricing.
