Capital Mailing Equipment — Addressing your Production Mailing Solutions

Capital Mailing Equipment Inc. is a nationwide integrator of industrial inkjet and production solutions for the printing and mailing industry. Headquartered in Romulus, Michigan and with 30+ years industry experience, CME's professionals know the importance of integrity, honesty, and exceptional value to their customers. Whether introducing cutting edge technologies or refurbishing and maintaining existing equipment, CME puts meeting customers' needs and exceeding their expectations at the forefront of all we do.

The Need for Speed

CME understands that time is money — that's why we offer the fastest drop-on-demand variable data inkjet addressing system on the market today. The new Hawk M6K UV Inkjet Addressing System utilizes UV inks and LED lamps for drying, which shortens production time overall. It can run 50,000 pieces per hour and print in any direction on just about any substrate. CME integrates, installs, and maintains the Hawk M6K nationwide, providing onsite custom integration and training to increase your production and reduce operating costs.

Engineering to Meet Evolving Needs

CME prides itself on listening to our customers and tailoring engineered solutions to meet both needs and budgets. CME discovered demand for a high-speed feeder-folder at a lower cost. Leaning on their extensive experience in the industry, CME engineered a solution, and partnered with Baumfolder to bring it to life. In August of 2020, CME will release the CME SS1—Single Shot Feeder Folder, which folds and inserts mail and packing slips at speeds up to 7,200 pieces per hour. It can run in-line with your current equipment, or as a stand-alone solution — and it is available at a fraction of the cost of other feeder-folders.

Relationships Matter Most

CME strives to build long-term relationships with every customer, large and small. We will tailor a proposal to integrate the right balance of new and pre-owned equipment to fit your budget — or will refurbish your existing equipment to give it new life.
