

CapStone Technologies gives mailers award-winning technology and expertise needed to stay ahead of the competition — in an ever-evolving industry.

CapStone's AutoViri™ Solutions bring speed, efficiency, and order to every step of the print-to-mail process.

AutoViri Software

AutoViri Software is a patented solution that integrates a mail operation's physical and digital workflows, offering total production visibility at every level and in every department of a print-to-mail business.

Mailers can prevent 17 costly USPS Mailer Scorecard errors in real time before jobs are released to the USPS, protecting their workshare discount and increasing productivity. It's cloud-based and can be used with or without AutoViri products in any print-to-mail environment.

Robotics & Automation

AutoViri robots automate the manual, repetitive tasks that are part of typical print-to-mail operations. Robots increase throughput, reduce labor requirements, prevent employee injury, and allow employees to focus on higher-value tasks. Automation reduces errors and, in turn, USPS assessments. Each robot is part of creating a robust audit trail to refute inaccurate assessments.

- ▶ **AutoViri Tray** – Processes all letter-size mail pieces and USPS tray types, sweeping 400+ mail pieces into intelligently selected trays.
- ▶ **AutoViri Tagger** – Tags trays from multiple processes and eliminates human labor and associated errors.
- ▶ **AutoViri Sleever** – Sleeves MM, EMM, and half trays, regardless of sleeve hygiene.
- ▶ **AutoViri Palletizer** – Concurrently builds at least six pallets, palletizing finished mail trays by job, customer/supplier agreement (CSA), destination or other criteria.
- ▶ **AutoViri Tray Management System** – Connects key areas of your mail operations to handle mail trays safely and efficiently.
- ▶ **AutoViri Opti-Sort Shelving** – Keep your jobs neatly, safely organized with customized steel shelving designed just for mailers.

Business Engineering

Whether you're considering minor or major changes, for current or future operations, in new or existing facilities, CapStone's vendor- and technology-neutral approach to business engineering provides you with the critical information necessary to make informed decisions regarding the optimal solutions for your key business objectives.
