Since 1967, Kirk-Rudy has manufactured innovative solutions for the mailing and printing industries. From their state of the art factory just north of Atlanta, GA, a complete product line of feeders, transport bases, conveyors, inkjet printers, inserters, labelers, tabbers, sorting, stacking, tip-on, pick-n-place, folders, bump turns, drying and matching/vision systems are engineered and produced with the highest standards of quality.

Harry Kirk's principle of "Build a better machine, and it will sell itself" has been Kirk-Rudy's mission since day one. A highly experienced and dedicated team work together every day designing and manufacturing the highest quality mailing and printing equipment used by the world's top companies.

Their most recent innovation is an all-in-one printing system that combines the heavy-duty transport Kirk-Rudy is famous for with the quality and reliability the industry expects from Memjet technology. The FireJet 4C Color Inkjet System is a new breed of inkjet printer that offers a profitable alternative to the smaller desktop, toner-based digital color printers on the market today, as well as a low-cost alternative to larger production press systems.

The FireJet 4C can print A3+ and A4 cut sheets in full color (CMYK) at 1600 x 1600 dpi and can print at speeds up to 150 ft/min. The newly designed user-replaceable printhead has been engineered to provide a longer life — approximately 120 liters — and outstanding image quality across a broad range of porous, uncoated offset, and inkjet-coated media.

Their Phoenix UV LED 4.25" inkjet system continues to be the choice among medium and high volume printers and mailers for addressing mail and variable data imprinting. Followed by the UltraJet v21 with its 2.12" print area producing high volumes of addressing and card imprinting at blazing speeds.

Using HP's thermal inkjet technology, the NetJet inkjet system is a fully modular, low cost system for addressing mail especially for low to medium volume operations. The KolorJet is a super-fast inkjet system for producing large volumes of full color envelopes at high speeds.

All of Kirk-Rudy's equipment is sold through a world-wide network of authorized dealers who have been factory trained on sales and service and fully supported by the factory.
