NPI has been designing leading-edge sorting equipment for over 40 years setting the standard for affordable, high-quality, high-speed, low-maintenance machines, while meeting the highest expectations in automated mail sorting with the industry's most compact design.

NPI equipment currently operates in over 27 countries providing functionality specific to each country and each customer's operational requirements.

Maxim is NPI's premier, high-speed letter sorter reaching speeds of up to 40,000 mail pieces per hour. This system offers the most compact, ergonomic design in the industry. The Maxim utilizes software-based decipher OCR technology running on standard off-the-shelf computers. Patented, precision anti-jamming technology reduces document damage, resulting in increased throughput and uniform stacking of the entire sort bin. Maxim stackers utilize bin-kicker systems eliminating the safety risks presented by systems using bin augers. The user-friendly operator interface allows networking of multiple systems.
